Define Problem Statements (Customer Problem Statement Template):

The Human Development Index (HDI) is widely used to measure the development level of countries based on health, education, and income indicators. Manual analysis of these indicators can be time-consuming and difficult for large datasets. There is a need for an intelligent system that predicts the HDI score using machine learning techniques, enabling users to quickly estimate the development level of a country from key socio-economic indicators.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A researcher analyzing human development	Predict the Human Development Index (HDI) of a country	It is difficult to manually analyze multiple socio-economic indicators	HDI depends on life expectancy, education, and GNI per capita	Confused about accurately determining a country's development level
