Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents a user or external actor interacting with the HDI Predictor system by providing input values and receiving prediction results. <i>(Example: Researcher, Student, Policy Maker)</i>
Rectangle with numbered header	Process	Represents a process that transforms input data into meaningful output. <i>(Example: Input Validation, HDI Prediction, Result Generation)</i>
Rectangle (solid fill, no number)	Data Store	Represents a storage location where data is saved and retrieved for processing. <i>(Example: HDI Dataset, Trained Model, Prediction History)</i>
Labeled arrow	Data Flow	Represents the movement of data between the user, processes, and data stores. <i>(Example: HDI Indicators, Validated Input, Predicted HDI Score, Analysis Results)</i>

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

Data Flow Diagram (Level-0) HDI Predictor System
